## CSCE 242 Project Part 1: Topic Selection

- Name of Website
  - Small Town Bagels
- Description
  - For my project, I have decided to build a website for a bagel shop including 5 pages consisting of Locations, Menu, Catering, Contact, and Careers. The website will be very user friendly and allow people to see the different locations of the store, what is being sold, catering options, contact information and career opportunities. On each page there will be multiple pictures and lots of information on each menu item so that users are able to see and know exactly what the shop has to offer. The website will allow me to manipulate the menu in order to add and remove different menu items or locations to keep the website up to date and relevant for users. I chose to create a website for a bagel shop because there are many reference websites that I can use so that I can create one that is user friendly and contains all the information needed for someone visiting the page.
- List of Page Names
  - Locations
  - Menu
  - Catering
  - Contact
  - Careers
- Description of Data that will be stored
  - On the Locations page there will be a list of Locations for the store including Address, Phone number, and the hours the store is open
  - On the Menu page there will be a page with all of the menu items, including names of the product and a description of what is on it and how much each item costs.
  - On the catering page there will be a page for catering option including the categories of foods available, a listing of the food item, with what it includes and how much it costs.
  - On the contact page there will be a page where users can contact the store including information about the company, links for the customers including FAQs and support, also a place where customers are able to fill their name and email where they can leave comments and suggestions
  - On the careers page there will be a page where users can gain access to career options, including positions for team members, leadership, catering, and support positions
